Hortonworks Data Platform: Apache Ambari Release Notes

Copyright © 2012-2017 Hortonworks, Inc. All rights reserved.

The Hortonworks Data Platform, powered by Apache Hadoop, is a massively scalable and 100% open source platform for storing, processing and analyzing large volumes of data. It is designed to deal with data from many sources and formats in a very quick, easy and cost-effective manner. The Hortonworks Data Platform consists of the essential set of Apache Hadoop projects including MapReduce, Hadoop Distributed File System (HDFS), HCatalog, Pig, Hive, HBase, ZooKeeper and Ambari. Hortonworks is the major contributor of code and patches to many of these projects. These projects have been integrated and tested as part of the Hortonworks Data Platform release process and installation and configuration tools have also been included.

Unlike other providers of platforms built using Apache Hadoop, Hortonworks contributes 100% of our code back to the Apache Software Foundation. The Hortonworks Data Platform is Apache-licensed and completely open source. We sell only expert technical support, training and partner-enablement services. All of our technology is, and will remain free and open source. Please visit the Hortonworks Data Platform page for more information on Hortonworks technology. For more information on Hortonworks services, please visit either the Support or Training page. Feel free to Contact Us directly to discuss your specific needs.

1. Release Notes Ambari - 2.5.2

RELEASE NOTES: Apache Ambari 2.5.2

The Ambari 2.5.2 Release Notes summarize and describe the following information related to Ambari 2.5.2:

- New Features [1]

- Behavioral Changes [2]

- Deprecation Notices [3]

- Patch Information [3]

- Known Issues [4]

- Fixed Issues [9]

> **Note**
>
> For information related to migrating from IOP-4.2.0 or -4.2.5 to HDP-2.6.2, refer to Migrating from IOP to HDP.

1.1. New Features

The Ambari 2.5.2 release is a maintenance release that includes no new features.

Ambari 2.5 contains the following features and improvements:

Table 1.1. Core Ambari

Feature	Description
Use DNS Aliases Instead of Host Names AMBARI-21370	Configure DNS aliases for specific hosts, so that configuration files mentioning those hosts do not need to be changed when the services on that host are moved to another physical machine.
Manage Host Include/Exclude Files AMBARI-21345	Configure include/exclude file management for HDFS and YARN. When enabled, Ambari will manage the associated include/exclude files and update their contents based on the state of hosts within Ambari.
Purge Ambari Server Database History AMBARI-20687	Automate the removal of historical records in the Ambari Server using the `db-purge-history` command.
Add/Remove Journal Nodes AMBARI-7748	Easily add additional JournalNodes, or remove and move existing JournalNodes for installations where NameNode HA is enabled.
Service Auto-Start AMBARI-2330	Configure specific components to start automatically if the host they are on reboots, or if the process exits abnormally.
Configuration Change Communication AMBARI-19572	A new pop-up has been added to more clearly communicate the impact on configuration for common administrative operations such as changing individual configurations, adding components, remove components, moving master services, and enabling HA.

Feature	Description
HDFS TopN User & Operation Visualization AMBARI-19320	Quickly understand the most frequent operations being performed on the NameNode, and more importantly who's performing those operations.
Download All Client Configurations AMBARI-19275	Download client configurations for all components installed in the cluster with a single-click.
Built-In SNMP MIB AMBARI-19257	The default SNMP Alert Notification now sends SNMP traps using an Ambari-specific MIB.
DB Inconsistency Self-Healing AAMBARI-18990	Common database inconsitencies are now automatically fixed when issues are detected on Ambari Server startup.
Log Search TP Update AMBARI-18821	Updates to the Log Search component to improve security, stability, and performance. This capability is currently **Tech Preview**.
Ignore Host Pre-Check when Adding a Host AMBARI-18817	Added the ability to disable host pre-checks when adding hosts after the cluster has been installed.
Post User-creation Script Hook AMBARI-18722	Create user home directories in HDFS when users are created in the Ambari DB, or sync'd with LDAP. This feature is disabled by default and can easily be enabled after installation of the Ambari Server.
Password Credential Store Management AMBARI-18650	For those components that support storing passwords in credential stores, such as Ranger, Hive, and Oozie, passwords are now stored in credential stores by default for fresh installs.
Port Preserving HS2 Rolling Upgrade AMBARI-18591	During the Rolling Upgrade, the Hive Server 2 port will not be changed. Hive downtime is still incurred during the upgrade.
Ambari SPNEGO Support AMBARI-18365	Ambari now supports API authentication using SPNEGO.
SmartSense Mandatory Installation AMBARI-18346	For new installs, SmartSense will be installed by default. Entering your Hortonworks SmartSense ID is still required to activate SmartSense. No bundles will be captured and sent until the a valid SmartSense ID is entered.
Grafana Dashboard for Ambari AMBARI-17589	New Grafana dashboards for visualizing the performance metrics of the Ambari Server itself are now available.
ZK ACL and SASL Configuration AMBARI-17324	ZooKeeper ACL's are now optimally configured for tighter security control and SASL is configured for fresh cluster installs.
Simplified Log Rotation Configuration AMBARI-16880	It's now easy to configure the number and size of backup files for each component using Log4j. For customers that are upgrading from previous versions of Ambari, there is a post-upgrade step required to fully enable this capability.
AMS Collector High Availability AMBARI-15901	The Ambari Metrics System now supports multiple Metrics Collector instances, providing High Availability and better scalability. This capability is currently **Tech Preview**.

More Information

SmartSense User Guide

1.2. Behavioral Changes

The Ambari 2.5.2 release introduces no new behavioral changes.

Ambari 2.5 introduces the following changes in behavior as compared to previous Ambari versions:

Table 1.2. Ambari 2.5 Behavioral Changes

Title	Description
HDP 2.2 Support Removed	Ambari support for HDP 2.2 is **removed** with Ambari 2.5.
SmartSense Mandatory Installation	For new installs, SmartSense will be installed by default. Entering your Hortonworks SmartSense ID is still required to activate SmartSense. No bundles will be captured and sent until the a valid SmartSense ID is entered.

1.3. Deprecation Notices

The following items will be removed from the listed or a future Ambari version.

Table 1.3. Ambari 2.5 Deprecated Items

Item	Deprecated	Removed
Falcon View	Ambari 2.5.0	
Slider View	Ambari 2.5.0	
Storm View		Ambari 2.5.0
Zeppelin View		Ambari 2.5.0

More Information

HDP 2.6.0 Deprecation Notices

1.4. Patch Information

Ambari 2.5.2.0 is based on Apache Ambari 2.5.2 and the following patches:.

Table 1.4. Apache Ambari 2.5.2.0 Patches

Apache Jira	Description
https://issues.apache.org/jira/browse/AMBARI-21782AMBARI-21782	Service Accounts page shows no data for stack services after Ambari is upgraded on IOP cluster
AMBARI-21788	Ensure topology_mappings.data has 0644 permissions
https://issues.apache.org/jira/browse/AMBARI-21793AMBARI-21793	Add support for variables used by Knox topology template
https://issues.apache.org/jira/browse/AMBARI-21794AMBARI-21794	Post Ambari upgrade on a migration cluster Oozie failed to restart when LZO compression is enabled
https://issues.apache.org/jira/browse/AMBARI-21800AMBARI-21800	Some services had issue coming up after express upgrade on IOP clusters
https://issues.apache.org/jira/browse/AMBARI-21800AMBARI-21800	Some services had issue coming up after express upgrade on IOP clusters
https://issues.apache.org/jira/browse/AMBARI-21807AMBARI-21807	Move Hive Metastore' wizard is stuck while configuring MYSQL_SERVER
https://issues.apache.org/jira/browse/AMBARI-21823AMBARI-21823	Spark2 Shuffle Configuration Property Not Configure After Upgrade From BigInsights
https://issues.apache.org/jira/browse/AMBARI-21829AMBARI-21829	Sqoop: hive import fails with exception 'java.io.IOException:java.lang.RuntimeException: native-lzo library not available' for LZO compression codec
https://issues.apache.org/jira/browse/AMBARI-21830AMBARI-21830	PowerPC - IOP/HDP migration, service restart fails post Ambari upgrade

Table 1.5. Apache Ambari 2.5.1.0 Patches

Apache Jira	Description
AMBARI-21045	Enable Storm's AutoTGT configs in secure mode
AMBARI-21092	HSI start failed due to Unrecognized VM option 'UseParallelGC-Xss512k' during EU (missing space)
AMBARI-21109	After decommission of a Nodemanager, the state of the Nodemanager shows Decommissioning instead of decommissioned
AMBARI-21110	ambari-server setup fails with default postgres
AMBARI-21116	Setting yarn.node-labels.fs-store.root-dir to a "path" changes the permission of the "root path"
AMBARI-21117	Existing hosts state didn't save after host was added
AMBARI-21118	HDP + HDF cluster cannot save configs for Storm when Streamline is installed due to missing configs
AMBARI-21121	Missing storm-site.xml in HDP-2.6 stack
AMBARI-21125	Ambari STS2 checker should use principal in secure cluster
AMBARI-21129	Nimbus fails to start when Ambari is upgraded to 2.5.1, EU to HDP 2.6.1, and cluster is then Kerberized
AMBARI-21131	Add NIFI JAAS Config StackFeatures to HDP StackFeatures
AMBARI-21135	Kafka service fails to start during EU from HDF 202 to 30 while resolving /etc/kafka/conf
AMBARI-21136	Upgrading Ambari to 2.5.1 stops Storm's nimbus in secure moded

1.5. Known Issues

Ambari 2.5.2 has the following known issues, scheduled for resolution in a future release. Also, refer to the Ambari Troubleshooting Guide for additional information.

Table 1.6. Ambari 2.5.2 Known Issues

Apache Jira	HWX Jira	Problem	Solution

AMBARI-22469	BUG- 91993	Ambari Sever 2.5.x set up as an Ambari Views Server (standalone server with a second Ambari Server registered as a remote server) fails when upgraded to version 2.6.0.
		
		`ERROR: Error executing schema upgrade, please check the server logs.`
		`ERROR: Error output from schema upgrade command:`
		`ERROR: Exception in thread "main" org.apache.ambari.server. AmbariException: Unable to find any CURRENT repositories.`
		`at org.apache.ambari.server. upgrade.SchemaUpgradeHelper. executeUpgrade(SchemaUpgradeHelper. java:203)`
		`at org.apache.ambari.server. upgrade.SchemaUpgradeHelper. main(SchemaUpgradeHelper.java:418)`
		`Caused by: org.apache.ambari. server.AmbariException: Unable to find any CURRENT repositories.`
		`at org.apache.ambari.server. upgrade.UpgradeCatalog260. getCurrentVersionID(UpgradeCatalog260. java:510)`
		`at org.apache.ambari.server. upgrade.UpgradeCatalog260.`
			No known workaround. Please contact Hortonworks Customer Support for assistance.

N/A	BUG-86606	After upgrading a cluster from Ambari 2.4.2 and HDP 2.5.2, Zeppelin proxy user settings are not configured in `core-site.xml`.	Manually configure hadoop.proxyuser.zeppelin.hosts and hadoop.proxyuser.zeppelin.groups in `core-site.xml`.
N/A	BUG-82900	If hosts are in maintenance mode during the Enable Kerberos wizard, the kerberos client is not installed, and keytabs and principals are not created for these hosts.	For those hosts that were in maintenance mode while Kerberos was being enabled, the kerberos client needs to be installed. This is possible using the REST API, or using the Ambari Web UI by going to the affected host and choosing to **Install clients**. This will install the Kerberos client and allow you to successfully generate keytabs. To generate keytabs go to **Admin > Kerberos > Regenerate Keytabs** and choose the **Only regenerate keytabs for missing hosts and components** option.
N/A	BUG-81933	NiFi service fails to start on a HDP + HDF integration cluster with the following exception: `Traceback (most recent call last): File "/var/lib/ambari-agent/ cache/common-services/NIFI/1.0.0/ package/scripts/nifi_ca.py", line 114, in <module> CertificateAuthority().execute() File "/usr/lib/python2.6/site- packages/resource_management/ libraries/script/script.py", line 329, in execute method(env) File "/var/lib/ambari-agent/ cache/common-services/NIFI/1.0.0/ package/scripts/nifi_ca.py", line 92, in start Execute((run_ca_script, params. jdk64_home, ca_server_script, params.nifi_config_dir + '/ nifi-certificate-authority.json', params.nifi_ca_log_file_stdout, params.nifi_ca_log_file_stderr, status_params.nifi_ca_pid_file), user=params.nifi_user) File "/usr/lib/python2.6/site- packages/resource_management/core/ base.py", line 155, in __init__ self.env. run() File "/usr/lib/python2.6/site- packages/resource_management/core/ environment.py", line 160, in run self. run_action(resource, action) File "/usr/lib/python2.6/site- packages/resource_management/core/ environment.py", line 124, in run_action provider_action() File "/usr/lib/python2.6/site- packages/resource_management/core/ providers/system.py", line 262, in action_run tries= self.resource.tries, try_sleep= self.resource.try_sleep)`	Use the following workaround: - Take the host out of Maintenance Mode - Use Install Clients on Host detail page of the host to install all of the clients which will include the Kerberos client. - Regenerate keytabs using **Admin > Kerberos > Regenerate Keytabs**

| N/A | BUG-81818 | No log information displays in Ambari Host Details > Log tab.

Host Environment: RHEL6 / MySql 5.6 | Restart the Ambari Server host. |
| N/A | BUG-79562 | Hive client fails to start on a blueprint-deployed cluster with only Hive Metastore and ZooKeeper deployed. | No known workaround. Please contact Hortonworks Customer Support for assistance. |
| N/A | BUG-77837 | Hive Visual Explain Plan not working in the Internet Explorer or Edge browsers. | Use the Chrome or Firefox browser to work with the Hive Visual Explain Plan feature. |
| N/A | BUG-63623 | After restarting Hive Server Interactive (HSI); old, calculated values based on earlier YARN configs are applied for HSI restart. This happens because RESTART HSI does not automatically recalculate the HSI configs. | User will have to manually trigger the HSI/LLAP re-calculation, using any one of the following actions:

(try each workaround in the following order)

• Turn off HSI, then turn on HSI manually, OR,

• Re-select a queue from the drop-down menu. OR,

• Adjust the number of LLAP nodes.(this slider is only editable if the selected queue is named "llap" and the queue is at root-level), OR |

Apache Jira	HWX Jira	Problem	Solution
			• Adjust the Maximum Total Concurrent Queries value, if necessary.

1.6. Fixed Issues

The following table lists selected issues resolved in Ambari 2.5:

Table 1.7. Ambari 2.5 Fixed Issues

Version	Category	Apache Jira	HWX Jira	Summary	Components
2.5.2.0	Other	AMBARI-20569	BUG-82431	Ambari UI to update KMS/ZooKeeper settings automatically when multiple KMS are involved	Ambari
2.5.2.0	Other	AMBARI-20872	BUG-79801	Validation of required configuration properties deferred till all the configuration is available (blueprint deployments)	Ambari
2.5.2.0	Other	AMBARI-20875	BUG-79320	Removing a service causes DB verification to produce warnings	Ambari
2.5.2.0	Other	AMBARI-20918	BUG-80117	AmbariServer Metrics service cannot be disabled	Ambari
2.5.2.0	Other	AMBARI-20950	BUG-83870	HdfsResource can not handle S3 URL when hbase.rootdir is set to S3 URL	Ambari
2.5.2.0	Other	AMBARI-20952	BUG-80327	Collection added to itself	Ambari
2.5.2.0	Other	AMBARI-21017	BUG-80732	Misc tab at Customize Services Page has 2 'Livy User';No helper popup to identify if its Livy/Livy2	Ambari, Spark
2.5.2.0	Other	AMBARI-21053	BUG-81070	Reverting Beacon stack advisor recommendation	Ambari
2.5.2.0	Other	AMBARI-21054	BUG-79571	Add ppc as a new OS for User.	Ambari
2.5.2.0	Other	AMBARI-21066	BUG-81168	validatePropertySchemaOfServiceXMLs UT fails	Ambari
2.5.2.0	Other	AMBARI-21067	BUG-80910	Atlas config values not getting populated on BP cluster install with strategy : "NEVER_APPLY"	Ambari
2.5.2.0	Other	AMBARI-21070	BUG-81082	Race condition: webhdfs call mkdir /tmp/druid-indexing before /tmp making tmp not writable.	Ambari
2.5.2.0	Other	AMBARI-21092	BUG-81324	HSI start failed due to Unrecognized VM option 'UseParallelGC-Xss512k' during EU (missing space)	Ambari, Hive2
2.5.2.0	Other	AMBARI-21133	BUG-81796	Configure Ambari Identity fails with "Cannot run program: ambari-sudo.sh" on Ubuntu	Ambari
2.5.2.0	Other	AMBARI-21138	BUG-81834	Java home setup is not taking place due to order	Ambari, Druid
2.5.2.0	Other	AMBARI-21153	BUG-81939	Hdfs directory viewer should be changed from tree view to list view	Ambari View
2.5.2.0	Other	AMBARI-21163	BUG-81995	Hive view not exporting/downloading the worksheet with entire number of rows to csv	Hive View
2.5.2.0	Other	AMBARI-21182	BUG-81325	Agent host disk usage alert hardcodes the stack directory	Ambari

Version	Category	Apache Jira	HWX Jira	Summary	Components
2.5.2.0	Other	AMBARI-21184	BUG-81922	When trying to Add Hiveserver2 service on a node, we just get a pop-up dialog box, and then a spinning wheel. Unable to click "Confirm Add"	Ambari
2.5.2.0	Other	AMBARI-21190	BUG-81653	Populate ranger.plugin.hive.urlauth.filesystem.schemes default value to hdfs:,file:,wasb:,adl:	Ambari, Ranger
2.5.2.0	Other	AMBARI-21204	BUG-81557	Yarn stopped by itself after start. HA run	Ambari
2.5.2.0	Other	AMBARI-21209	BUG-82434	Incorrect ambari DDL script for Oracle DB	Ambari
2.5.2.0	Other	AMBARI-21226	BUG-82413	STS: enhance default config's	Ambari, Spark
2.5.2.0	Other	AMBARI-21227	BUG-82350	Updating Ranger install.properties file	Ambari, Ranger
2.5.2.0	Other	AMBARI-21229	BUG-82517	[Cloudbreak] Cluster fails with CloudbreakOrchestratorFailedException	Ambari, Cloudbreak
2.5.2.0	Other	AMBARI-21236	BUG-82532	Resource Manager failed to start	Ambari
2.5.2.0	Other	AMBARI-AMBARI-21237	BUG-81182	Add validation and recommendation if Hive user value is different than Hive	Ambari
2.5.2.0	Other	AMBARI-21238	BUG-81805	Kafka userprincipal to shortname is not using AUTH_TO_LOCAL rules for authorization	Ambari, Kafka
